

ABSTRACT OF THE DISCLOSURE

A built-in vacuum cleaning box with air outside discharge works autonomously and independently, and includes a case or basin (10) with outside vacuumed and filtered air discharge (18) to be built-in into the wall of a building, a main body (12) inserted into the basin and that defines with the basin an upper compartment (28) containing the autonomous suction power unit and the air intake port (30), while the dust collection bag forms a lower compartment (20), as well as an external frame (14).
